

UR120 Under Roller Assembly

The under-roller spread is delivered as a “turn-key” solution, including user manual, el- and hydraulic diagrams, flow sheet aswell as spare hoses and connections.

During operation, the under-roller will function as a dynamic cradle to spool/unspool the product by use of the HPU controlled 4 wheel drive system. As a safety redundancy an accumulator powered centre wheel will be fitted.

Key Features

- Designed for 120mT load
- Easy to assemble and operate
- Drive wheels rated to 1100kg with normally closed brake system
- Hydraulic counterbalance valve to handle reel imperfections or high product tension
- Customizable footprint to fit a multitude of sized reels
- Portable in 20’ open top container

Specifications

Description	Cable Chute	Notes
