

Subsea Reservoir

5450 litre

The 5450 litre Subsea Reservoir is a pressure compensated collapsible reservoir with protective cage and mudmat for safe deployment and recovery. It is utilized in the deployment, injection or recovery of fluids to and from equipment residing on the seafloor. Other tooling can be integrated as DWP, IHPU or HPW Pump.

Specifications

Dimensions	3658 mm W x 3864 mm L x 2818 mm H with mudmat deployed
Weight	7711kg (air) filled with Water 3085 kg (air) empty 2630 kg (water) empty
Materials	Bladder: Neoprene coated ballaistic nylon Structural steel cage, mudmat and frame All SSTL plumbing
Certification	Certified according to DNV 2.7-1
