

NOR Backpack MKII

The NOR Backpack MKII was made for easy integration with ROVs, and offers a high fluid capacity. It has a wide range of capabilities for operating various tooling, or other intervention tasks.

The backpack can have brackets or probes on the back, which makes it compatible with ROV frame connection points.

The backpack can have two separate pump systems; one is on a DWP, and the other is a 10K booster pump. The 10K booster pump could be connected to a separate Compensator. In deepwater operations this allows for more versatility, and operational options, as well as pressure testing and injections.

Key Features

- Lifting certificate
- Easy integration
- Many options of equipment integration.
- Internal Valve pack
- Dirty work pack
- IHPU
- Various sensors
- Already made brackets for ROV's: FCV3000, Schilling, Kystdesign, Hercules, Centurion SMD

Specifications

Dimensions	1650 x 800 x 1437mm
WLL	700kg
Weight in air	30kg
Weigh in water	-40kg
Depth rating	3000m
Max Pressure output	207 bar
Flow capacity	Dependent on DWP, either 60lpm or 120lpm
Fluid capacity	3x 16Ltr
